What You Will Learn Set up a scoring system using Moodle Gradebook Enable communication and collaboration in your class as a Learning Community using forums Assess your learners' abilities by setting up challenges and quests Configure gateways to check and ensure progress before new content or activities are released Create Moodle assignments to provide effective feedback through a comment bank and custom scale Issue Open Badges to recognize achievements and set up an online backpack to share digital badges Reduce anxiety for learners by using the game-like concept of "Levelling Up" In Detail This book describes how teachers can use Gamification

design within the Moodle Learning Management System. Game elements can be included in course design by using, badges, rubrics, custom grading scales, forums, and conditional activities. Moodle courses do not have to be solo-learning experiences that replicate Distance Education models. The Gamification design process starts by profiling players and creating levels of achievement towards meeting learning outcomes. Each task is defined, valued, and sequenced. Motivation loops are devised to keep the momentum going. In a gaming studio, this approach would require a team of specialists with a large budget and time frames. Preparing for a class rarely has these optimal conditions. The approach used in this book is to introduce game elements into the course design gradually. First, apply gamification to just one lesson and then build up to gamifying a series of lessons over a term. Each example will indicate the difficulty level and time investment. Try it out to see what is most effective with your learners and choose wisely in your use of technology. By the end of this book, you will be able to create Moodle courses that incorporate choice, communication, challenge, and creativity. Style and approach An easy-to-follow guide full of screenshots and step-by-step instructions with estimated time frames required to accomplish numerous tasks. Tips are offered for new Moodlers and plugin extensions are suggested for advanced Moodlers. The focus of the book is on why you would want to use each activity rather than detailed technical descriptions.
