Children's health has clearly improved over the past several decades. Significant and positive gains have been made in lowering rates of infant mortality and morbidity from infectious diseases and accidental causes, improved access to health care, and reduction in the effects of environmental contaminants such as lead. Yet major questions still remain about how to assess the status of children's health, what factors should be monitored, and the appropriate measurement tools that should be used. Children's Health, the Nation's Wealth: Assessing and Improving Child Health provides a detailed examination of the information about children's health that is needed to help policy makers and program providers at the federal, state, and local levels. In order to improve children's health-and, thus, the health of future generations-it is critical to have data that can be used to assess both current conditions and possible future threats to children's health. This compelling book describes what is known about the health of children and what is needed to expand the knowledge. By strategically improving the health of children, we ensure healthier future generations to come. From Pulitzer Prize winner Raymond Bonner, the gripping story of a grievously mishandled murder case that put a twenty-three-year-old man on death row. In January 1982, an elderly white widow was found brutally murdered in the small town of Greenwood, South Carolina. Police immediately arrested Edward Lee Elmore, a semiliterate, mentally retarded black man with no previous felony record. His only connection to the victim was having cleaned her gutters and windows, but barely ninety days after the victim's body was found, he was tried, convicted, and sentenced to death. Elmore had been on death row for eleven years when a young attorney named Diana Holt first learned of

his case. With the exemplary moral commitment and tenacious investigation that have distinguished his reporting career, Bonner follows Holt's battle to save Elmore's life and shows us how his case is a textbook example of what can go wrong in the American justice system. Moving, enraging, suspenseful, and enlightening, *Anatomy of Injustice* is a vital contribution to our nation's ongoing, increasingly important debate about inequality and the death penalty. In the years since the third edition of this indispensable reference was published, a great deal has been learned about the nutritional requirements of common laboratory species: rat, mouse, guinea pig, hamster, gerbil, and vole. The Fourth Revised Edition presents the current expert understanding of the lipid, carbohydrate, protein, mineral, vitamin, and other nutritional needs of these animals. The extensive use of tables provides easy access to a wealth of comprehensive data and resource information. The volume also provides an expanded background discussion of general dietary considerations. In addition to a more user-friendly organization, new features in this edition include: A significantly expanded section on dietary requirements for rats, reporting substantial new findings. A new section on nutrients that are not required but that may produce beneficial results. New information on growth and reproductive performance among the most commonly used strains of rats and mice and on several hamster species. An expanded discussion of diet formulation and preparation—including sample diets of both purified and natural ingredients. New information on mineral deficiency and toxicity, including warning signs. This authoritative resource will be important to researchers, laboratory technicians, and manufacturers of laboratory animal feed. Illuminating the moral dilemmas that lie at the heart of a slaveholding society, this book tells the story of a young slave who was sexually exploited by her master and ultimately executed for his murder. Celia was only fourteen years old when she was acquired by John Newsom, an aging widower and one of the most prosperous and respected citizens of Callaway County, Missouri. The pattern of sexual abuse that would mark their entire relationship began almost immediately. After purchasing Celia in a neighboring county, Newsom raped her on the journey back to his farm. He then established her in a small cabin near his house and visited her regularly (most likely with the knowledge of the son and two daughters who lived with him). Over the next five years, Celia

bore Newsom two children; meanwhile, she became involved with a slave named George and resolved at his insistence to end the relationship with her master. When Newsom refused, Celia one night struck him fatally with a club and disposed of his body in her fireplace. Her act quickly discovered, Celia was brought to trial. She received a surprisingly vigorous defense from her court-appointed attorneys, who built their case on a state law allowing women the use of deadly force to defend their honor. Nevertheless, the court upheld the tenets of a white social order that wielded almost total control over the lives of slaves. Celia was found guilty and hanged. Melton A. McLaurin uses Celia's story to reveal the tensions that strained the fabric of antebellum southern society. Celia's case demonstrates how one master's abuse of power over a single slave forced whites to make moral decisions about the nature of slavery. McLaurin focuses sharply on the role of gender, exploring the degree to which female slaves were sexually exploited, the conditions that often prevented white women from stopping such abuse, and the inability of male slaves to defend slave women. Setting the case in the context of the 1850s slavery debates, he also probes the manner in which the legal system was used to justify slavery. By granting slaves certain statutory rights (which were usually rendered meaningless by the customary prerogatives of masters), southerners could argue that they observed moral restraint in the operations of their peculiar institution. An important addition to our understanding of the pre-Civil War era, *Celia, A Slave* is also an intensely compelling narrative of one woman pushed beyond the limits of her endurance by a system that denied her humanity at the most basic level. Chemical education is essential to everybody because it deals with ideas that play major roles in personal, social, and economic decisions. This book is based on three principles: that all aspects of chemical education should be associated with research; that the development of opportunities for chemical education should be both a continuous process and be linked to research; and that the professional development of all those associated with chemical education should make extensive and diverse use of that research. It is intended for: pre-service and practising chemistry teachers and lecturers; chemistry teacher educators; chemical education researchers; the designers and managers of formal chemical curricula; informal chemical educators; authors of textbooks and curriculum support

materials; practising chemists and chemical technologists. It addresses: the relation between chemistry and chemical education; curricula for chemical education; teaching and learning about chemical compounds and chemical change; the development of teachers; the development of chemical education as a field of enquiry. This is mainly done in respect of the full range of formal education contexts (schools, universities, vocational colleges) but also in respect of informal education contexts (books, science centres and museums). The assessment of young children's development and learning has recently taken on new importance. Private and government organizations are developing programs to enhance the school readiness of all young children, especially children from economically disadvantaged homes and communities and children with special needs. Well-planned and effective assessment can inform teaching and program improvement, and contribute to better outcomes for children. This book affirms that assessments can make crucial contributions to the improvement of children's well-being, but only if they are well designed, implemented effectively, developed in the context of systematic planning, and are interpreted and used appropriately. Otherwise, assessment of children and programs can have negative consequences for both. The value of assessments therefore requires fundamental attention to their purpose and the design of the larger systems in which they are used. Early Childhood Assessment addresses these issues by identifying the important outcomes for children from birth to age 5 and the quality and purposes of different techniques and instruments for developmental assessments. The Sixth Edition of Robert K. Yin's bestseller provides a complete portal to the world of case study research. Offering comprehensive coverage of the design and use of the case study method in addition to an integration of applications, the book gives readers access to exemplary case studies drawn from a wide variety of academic and applied fields. The integration of applications will enable users to see more directly how concrete case studies can implement the principles of case study research methods. *Down Girl* is a broad, original, and far ranging analysis of what misogyny really is, how it works, its purpose, and how to fight it. The philosopher Kate Manne argues that modern society's failure to recognize women's full humanity and autonomy is not actually the problem. She argues instead that it is women's manifestations of human capacities -- autonomy,

agency, political engagement -- is what engenders misogynist hostility. A comprehensive text for undergraduate-level biology courses that covers cells, genetics, mechanisms and evolution, biological diversity, plant and animal forms and functions, and ecology; and includes review questions, activities, figures, chapter summaries, and a CD-ROM which provides access to online materials. Williams: "Makes stones sing" --Kirkus Reviews "Williams's lively mixture of hard science and piquant lore is sure to fire the readers' curiosity" --Publisher's Weekly \*Part history, part folklore, part geology \* Features charming black-and-white illustrations From meadow trails to airy mountaintops and wide open desert, cairns -- those seemingly random stacks of rocks -- are surprisingly rich in stories and meaning. The Inuit have more than two dozen terms to describe cairns and their uses! In Cairns: Messengers in Stone, geologist and acclaimed nature writer David B. Williams (Stories in Stone: Travels through Urban Geology) explores the history of cairns from the moors of Scotland to the peaks of the Himalaya -- where they come from, what they mean, why they're used, how to make cairns, and more. Cairns are so much more than a random pile of rocks, knowing how to make cairns can drastically alter the meaning of the formation. Hikers, climbers, travelers, gardeners, and nature buffs alike will delight in this quirky, captivating collection of stories about cairns. Between Struggle and Hope documents the process of black educational development in the years 1894-1915, the age of Booker T. Washington. Using as case studies the careers of four key black educators of the period, author Arnold Cooper analyzes the impact of Washington's Tuskegee Principle on the thinking of William Edwards, William Holtzclaw, Laurence Jones, and Thomas Fuller -- men who were among the pioneers in the development of modern black educational institutions in the United States. - Jacket flap. "A passionate, incisive critique of the many ways in which women and girls of color are systematically erased or marginalized in

discussions of police violence.” —Michelle Alexander, author of *The New Jim Crow Invisible No More* is a timely examination of how Black women, Indigenous women, and women of color experience racial profiling, police brutality, and immigration enforcement. By placing the individual stories of Sandra Bland, Rekia Boyd, Dajerria Becton, Monica Jones, and Mya Hall in the broader context of the twin epidemics of police violence and mass incarceration, Andrea Ritchie documents the evolution of movements centered around women’s experiences of policing. Featuring a powerful forward by activist Angela Davis, *Invisible No More* is an essential exposé on police violence against WOC that demands a radical rethinking of our visions of safety—and the means we devote to achieving it.

Trends in State Courts is an annual, peer-reviewed publication that highlights innovative practices in critical areas that are of interest to courts, and often serves as a guide for developing new initiatives and programs and supporting policy decisions. and racial justice. Social isolation and loneliness are serious yet underappreciated public health risks that affect a significant portion of the older adult population. Approximately one-quarter of community-dwelling Americans aged 65 and older are considered to be socially isolated, and a significant proportion of adults in the United States report feeling lonely. People who are 50 years of age or older are more likely to experience many of the risk factors that can cause or exacerbate social isolation or loneliness, such as living alone, the loss of family or friends, chronic illness, and sensory impairments. Over a life course, social isolation and loneliness may be episodic or chronic, depending upon an individual's circumstances and perceptions. A substantial body of evidence demonstrates that social isolation presents a major risk for premature mortality, comparable to other risk factors such as high blood pressure, smoking, or obesity. As older adults are particularly high-volume and high-frequency users of the health care system, there is an opportunity for health care professionals to identify, prevent, and mitigate the adverse health impacts of social isolation and loneliness in older adults. *Social Isolation and Loneliness in Older Adults* summarizes the evidence base and explores how social isolation and loneliness affect health and quality of life in adults aged 50 and older, particularly among low income, underserved, and vulnerable populations. This report makes recommendations specifically for clinical settings of health care to identify those who suffer the resultant negative health impacts of social isolation and loneliness and target interventions to improve their social conditions. *Social Isolation and Loneliness in Older Adults* considers clinical tools and methodologies, better education and training for the health care workforce, and dissemination and implementation that will be important for translating research into practice, especially as the evidence base for effective interventions continues to flourish. The author of *Race for Profit* carries out “[a] searching examination of the social, political and economic dimensions of the prevailing racial order” (Michelle Alexander, author of *The New Jim Crow*). In this winner of the Lannan Cultural Freedom Prize for an Especially Notable Book, Keeanga-Yamahtta Taylor “not only exposes the canard of color-blindness but reveals how structural racism and class oppression are joined at the hip” (Robin D. G. Kelley, author of *Freedom Dreams*). The eruption of

mass protests in the wake of the police murders of Michael Brown in Ferguson, Missouri, and Eric Garner in New York City have challenged the impunity with which officers of the law carry out violence against black people and punctured the illusion of a post-racial America. The Black Lives Matter movement has awakened a new generation of activists. In this stirring and insightful analysis, activist and scholar Keeanga-Yamahtta Taylor surveys the historical and contemporary ravages of racism and the persistence of structural inequality, such as mass incarceration and black unemployment. In this context, she argues that this new struggle against police violence holds the potential to reignite a broader push for black liberation. "This brilliant book is the best analysis we have of the #BlackLivesMatter moment of the long struggle for freedom in America. Keeanga-Yamahtta Taylor has emerged as the most sophisticated and courageous radical intellectual of her generation." -Dr. Cornel West, author of Race Matters "A must read for everyone who is serious about the ongoing praxis of freedom." -Barbara Ransby, author of Ella Baker and the Black Freedom Movement "[A] penetrating, vital analysis of race and class at this critical moment in America's racial history." -Gary Younge, author of The Speech: The Story Behind Dr. Martin Luther King Jr.'s Dream Why do some people quickly land a job and then skyrocket to the top of the corporate ladder while others take months to find a job they hate, only to lose it a short time later?"THIS Is Who We Hire!" covers every essential skill you need to help you get a job you love and negotiate a high salary and great benefits. The Fed. Transit Admin. (FTA) collects and analyzes data from across the country on public transportation (PT) fuel use, vehicles deployed, rides taken, etc. These data provides valuable insight into the impacts of auto, truck, SUV, and PT travel on the production of greenhouse gas emissions. There are significant greenhouse gas emission savings by using PT. This paper presents an analysis of the data and frames it in a broader context. It concludes with a description of FTA actions that address climate change. PT can reduce greenhouse gas emissions by: Providing a low emissions alternative to driving; Facilitating compact land use, reducing the need to travel long distances; and Minimizing the carbon footprint of transit oper. An illuminating introduction to the philosophy of Simone de Beauvoir and its relevance to modern life In an age of self-exposure, what does it mean to be authentic? "Authenticity" has become attenuated to the point of meaninglessness; everyone says to be yourself, but what that means is anyone's guess. For existential philosopher Simone de Beauvoir, authenticity is not the revelation of a true self, but an exhilarating quest towards fulfillment. Her view, central to existentialism, is that we exist first and then spend the rest of our lives creating-not discovering-who we are. To be authentic is to live in pursuit of self-creation and self-renewal, with many different paths towards diverse goals. How to Be Authentic is a lively introduction to Simone de Beauvoir's philosophy of existentialism, as well as an exploration of the successes and failures that Beauvoir and other women have experienced in striving towards authenticity. Skye C. Cleary takes us through some of life's major relationships and milestones: friendship; romantic love; marriage; children; and death, and examines how each offers an opportunity for us to stretch toward authenticity. While many people don't get to

choose their path in life—whether because of systemic oppression or the actions of other individuals—Cleary makes a compelling case that Beauvoir's ideas can help us become more conscious of living purposefully, thoughtfully, and with vitality, and she shows us how to do so in responsible ways that invigorate every person's right to become poets of their own lives.
