The Oil Trading Manual (OTM) provides a unique and comprehensive reference source to the latest developments in the structure and conduct of the international oil markets including: Physical characteristics and refining Oil pricing arrangements Physical oil markets Forward and futures contracts Options and swaps Operations and logistics Accounting and taxation Controlling financial risk Legal and regulatory control OTM provides a unique and comprehensive reference source to the structure and conduct of the international oil markets. The manual covers all the major oil trading instruments and their applications; the trading centres, contracts, uses and users of both the physical and the terminal oil markets, and their administrative, management, tax, and accounting implications. It also includes vital information on changes to the international legal and regulatory structures. The manual is divided into three complementary parts; Characteristics An introduction to oil and oil trading, and includes material on the nature of oil as a commodity, refinery processes and the different ways in which oil is priced. Instruments and markets Deals with the oil market itself taking each segment in turn, explaining how the various trading instruments work and describing the markets that have evolved to trade them. It starts with the physical oil markets, moving on to forward and futures markets, followed by options and swaps. Administration Covers the essential 'back-room' activities without which oil trading could not continue. It includes practical material on operations and logistics, credit control, accounting, taxation, contracts and regulation, and controlling financial risk, providing a unique guide to the subject. Compiled from the contributions of a range of internationally respected professionals, it is the indispensable practical companion for all those involved with trading in this complex commodity. Essential Oil entry within this guide gives a brief introduction to each oil and covers its main uses and benefits. The key ingredients are also listed and the unique aromatic description. Essential oils are the highly concentrated version of the natural oils in plants. Getting essential oils from plants is done with a process called distillation, most commonly distillation by steam or water, where many parts of the plants are being used, including the plant roots, leaves, stems, flowers, or bark. After distillation, the outcome is a highly concentrated portion of essential oil, which will have the characteristic fragrance and properties of the plant from which it was extracted, and contain the true essence of the plant it came from. This includes the smell, but also the plant's healing properties and other plant characteristics. You can see how this highly potent extract of a plant or herb can be extremely useful for many purposes. Essential oils have been used throughout history in many cultures for their medicinal and therapeutic benefits. "I believe that for every illness or ailment known to man, that God has a plant out here that will heal it. We just need to keep discovering the properties for natural healing." ?
