***recognizing the challenges to meet local needs in a global, information society. The authors used different approaches to identify trends, opportunities and needs as well as effectiveness and assessment in countries ranging from Australia, Belgium, China, Denmark, Greece, India, Pakistan, Spain, the United States and elsewhere throughout the world. Several authors describe successful programs designed to promote libraries within a community, nation, or academic community. Others report on trends and changes taking place within the user community and present case studies on the response of libraries to meet challenges and opportunities - through marketing and management. Storage Systems: Organization, Performance, Coding, Reliability and Their Data Processing was motivated by the 1988 Redundant Array of Inexpensive/Independent Disks proposal to replace large form factor mainframe disks with an array of commodity disks. Disk loads are balanced by striping data into strips—with one strip per disk— and storage reliability is enhanced via replication or erasure coding, which at best dedicates  $k$  strips per stripe to tolerate  $k$  disk failures. Flash memories have resulted in a paradigm shift with Solid State Drives (SSDs) replacing Hard Disk Drives (HDDs) for high performance applications. RAID and Flash have resulted in the emergence of new storage companies, namely EMC, NetApp, SanDisk, and Purestorage, and a multibillion-dollar storage market. Key new conferences and publications are***

***reviewed in this book. The goal of the book is to expose students, researchers, and IT professionals to the more important developments in storage systems, while covering the evolution of storage technologies, traditional and novel databases, and novel sources of data. We describe several prototypes: FAWN at CMU, RAMCloud at Stanford, and Lightstore at MIT; Oracle's Exadata, AWS' Aurora, Alibaba's PolarDB, Fungible Data Center; and author's paper designs for cloud storage, namely heterogeneous disk arrays and hierarchical RAID. • Surveys storage technologies and lists sources of data: measurements, text, audio, images, and video • Familiarizes with paradigms to improve performance: caching, prefetching, log-structured file systems, and merge-trees (LSMs) • Describes RAID organizations and analyzes their performance and reliability • Conserves storage via data compression, deduplication, compaction, and secures data via encryption • Specifies implications of storage technologies on performance and power consumption • Exemplifies database parallelism for big data, analytics, deep learning via multicore CPUs, GPUs, FPGAs, and ASICs, e.g., Google's Tensor Processing Units***

***The Complete Guide to Optimizing Systems Performance*** Written by the winner of the 2013 LISA Award for Outstanding Achievement in System Administration Large-scale enterprise, cloud, and virtualized computing systems have introduced serious performance challenges. Now, internationally renowned performance expert Brendan Gregg has brought

**together proven methodologies, tools, and metrics for analyzing and tuning even the most complex environments. *Systems Performance: Enterprise and the Cloud* focuses on Linux® and Unix® performance, while illuminating performance issues that are relevant to all operating systems. You'll gain deep insight into how systems work and perform, and learn methodologies for analyzing and improving system and application performance. Gregg presents examples from bare-metal systems and virtualized cloud tenants running Linux-based Ubuntu®, Fedora®, CentOS, and the illumos-based Joyent® SmartOS™ and OmniTI OmniOS®. He systematically covers modern systems performance, including the “traditional” analysis of CPUs, memory, disks, and networks, and new areas including cloud computing and dynamic tracing. This book also helps you identify and fix the “unknown unknowns” of complex performance: bottlenecks that emerge from elements and interactions you were not aware of. The text concludes with a detailed case study, showing how a real cloud customer issue was analyzed from start to finish. Coverage includes • Modern performance analysis and tuning: terminology, concepts, models, methods, and techniques • Dynamic tracing techniques and tools, including examples of DTrace, SystemTap, and perf • Kernel internals: uncovering what the OS is doing • Using system observability tools, interfaces, and frameworks • Understanding and monitoring application performance • Optimizing CPUs: processors, cores, hardware**

**threads, caches, interconnects, and kernel scheduling • Memory optimization: virtual memory, paging, swapping, memory architectures, busses, address spaces, and allocators • File system I/O, including caching • Storage devices/controllers, disk I/O workloads, RAID, and kernel I/O • Network-related performance issues: protocols, sockets, interfaces, and physical connections • Performance implications of OS and hardware-based virtualization, and new issues encountered with cloud computing • Benchmarking: getting accurate results and avoiding common mistakes This guide is indispensable for anyone who operates enterprise or cloud environments: system, network, database, and web admins; developers; and other professionals. For students and others new to optimization, it also provides exercises reflecting Gregg's extensive instructional experience. A Manual for the Performance Library is a guide for organizing and operating a library of music performance materials for orchestra, band, chorus, jazz ensemble, and chamber music. Offers an historical perspective of the past 25 years of computers in libraries, profiling currently available processing systems according to their size and platform. The short- and long-term future of information technology in libraries.;College or university bookstores may order five or more copies at a special student price which is available from Marcel Dekker upon request. ***music performance library is the heart of any musical ensemble, supplying music to performers and information to an entire organization. This text contains valuable information on this important topic for all musicians, including music directors, conductors, student librarians, community volunteers, professional performance librarians, and performers. This essential resource provides step-by-step directions on the librarian's responsibilities, including how to: locate and choose editions \* purchase and rent music \* catalog new works \* store and preserve music \* prepare music for performance \* mark bowings \* correct errata \* prepare manuscripts and programs \* distribute and collect parts \* and communicate efficiently. This guide provides library directors, managers, and administrators in all types of libraries with complete and up-to-date instructions on how to evaluate library services in order to improve them. • Helps librarians to thoroughly examine their libraries' services toward making improvements • Enables librarians to answer with authority the question "what difference do we make?" • Explains the most effective ways of conducting library measurement and evaluation, covering qualitative and quantitative tools, data analysis, and specific methodologies for measuring and assessing specific services • Offers a highly readable and clear treatment of a topic of paramount importance, but that librarians often find difficult The purpose of this reference book is to give the reader a quick and effective access to***

This IBM® Redbooks® publication describes the IBM solution for data deduplication, the IBM System Storage® TS7650G IBM ProtecTIER® Deduplication Gateway, and the IBM TS7620 ProtecTIER Deduplication Appliance Express. This solution consists of the IBM System Storage ProtecTIER Enterprise Edition V3.3 software and the IBM System Storage TS7600 family of products. They are designed to address the disk-based data protection needs of enterprise data centers. We describe the components that make up IBM System Storage TS7600 with ProtecTIER and provide extensive planning and sizing guidance that enables you to determine your requirements and the correct configuration for your environment. We then guide you through the basic setup steps on the system and on the host. We also describe all operational tasks that are required during normal day-to-day operation or when upgrading your TS7600 products. All available models of the ProtecTIER deduplication system can now be ordered in a configuration to operate in one of the following modes for which we provide setup, configuration and usage guidelines for your***

**measurement platforms, including library assessment, evaluation methodologies, surveys, and annual reporting. Whilst several different performance measurement tools are considered, the book's main focus is on one tool in particular: Key Performance Indicators (KPIs). KPIs are increasingly being used to measure the performance of library and information services, however, linking KPIs to quality outcomes, such as impact and value can prove very difficult. This book discusses, in detail, the concept of KPIs in the broader context of library assessment and performance measurement. Through reviewing some of the applied theory around using KPIs, along with harvesting examples of current best practices in KPI usage from a variety of different libraries, the book demystifies library KPIs, providing a toolkit for any library to be used in setting meaningful KPIs against targets, charters, service standards, and quality outcomes. Provides an overview of performance measurement tools for libraries Discusses KPIs in a broad context Offers an understanding of reporting, monitoring, and acting upon KPI data Provides best practice examples of Key Performance Indicators (KPIs) in libraries Includes practical and reusable examples of KPIs that can be applied in local contexts (a toolkit approach) Measuring the performance of a library's services is one of the most crucial parts of providing a good service. This important book is the first to provide an accessible account of current thinking on the evaluation of library services, both**

**traditional and - importantly - electronic library services. Illustrated throughout with a range of international examples across different types of libraries, this book will become the standard work on performance measurement. The book is structured to focus first of all on the intended user of the services (outcome and impact perspectives), then to look at the management of the service (output and process issues), then at evaluating the building blocks of services (input issues) and finally to draw together these strands by examining some of the broader frameworks for evaluation which have emerged. The book ends with an extensive Appendix with a description of key methodologies and suitable references. Each chapter includes suggestions for further reading as well as key references. The key areas addressed include: user satisfaction impact on users economic impact inputs evaluating processes counting the outputs acquiring content staff evaluating infrastructure benchmarking and balanced scorecard standards based approaches. Readership: The emphasis on principles and techniques in the book means that it is perfect reading for busy practitioners but it is also eminently suitable for students and researchers trying to get to grips with this tricky area. Digital Libraries are complex and advanced forms of information systems which extend and augment their physical counterparts by amplifying existing resources and services and enabling development of new kinds of human problem solving and expression. Their complexity arises**

**from the data-rich domain of discourse as well as from extended demands for multi-disciplinary input, involving distributed systems architectures, structured digital documents, collaboration support, human-computer interaction, information filtering, etc. In addition to the broad range of technical issues, ethics and intellectual property rights add to the complication that is normally associated with the development, maintenance, and use of Digital Libraries. The Second European Conference on Digital Libraries (ECDL'98) builds upon the success of the first of this series of European Conferences on Research and Advanced Technology for Digital Libraries, held last year in Pisa, Italy, September 1-3, 1997.
