Medical Librarian 2.0 Oct 18 2022 Widespread use and acceptance of the World Wide Web in the home and office has eclipsed many other technological advances. Next-generation applications like wikis, podcasting, streaming video, virtual reference, RSS feeds, and blogs sit on the cutting edge of changes that will—and have already begun to—transform librarianship. *Medical Librarian 2.0* is a vital groundbreaking resource for understanding and implementing these technologies in reference services. *Medical Librarian 2.0* is both an examination of current technology and a resource for practical applications as well. This important collection includes informative chapters that cover the evolving spectrum of digital tools. Through detailed explorations of current technologies, as well as the ways institutions have implemented them to better serve both patrons and staff, this text provides the insight and necessary awareness required for librarians who want to stay current with these technologies and to make their services relevant to the newer generation of users. With a wealth of informative tables, diagrams, Web site illustrations, online resources, photographs, and references, *Medical Librarian 2.0* is an essential resource that looks at the pervasive Web technologies medical libraries—and other libraries—are successfully adapting to both update old services and provide new ones. Contributors to *Medical Librarian 2.0* discuss:

- the tools and applications shaping Web 2.0
- extending these vibrant technologies into librarianship with Library 2.0
- virtual reference services in academic health science libraries
- e-mail, chat, and

web forms in the changing landscape of reference services • syndicated information delivery via RSS and its integration • producing, using, organizing, and distributing podcasts • challenges to and successes of streaming video in health sciences libraries • social networking, social media sharing, and social bookmarking tools • tagging, peer production, blogs, and folksonomy • open source software and content management systems like Drupal • wikis and the organizational knowledgebase • creating and utilizing blended applications and mashups • current concerns over data and security • and many other important topics! With a wealth of tables, diagrams, Web site illustrations, online resources, photographs, and references, *Medical Librarian 2.0* offers readers clear examples of these applications put into practice. *Medical Librarian 2.0* is an essential resource for librarians, especially those in medical settings, library science educators and students, and those looking to stay at the forefront of emerging reference technology.

The Medical Library Association Guide to Data Management for Librarians Nov 19 2022 Technological advances and the rise of collaborative, interdisciplinary approaches have changed the practice of research. The 21st century researcher not only faces the challenge of managing increasingly complex datasets, but also new data sharing requirements from funders and journals. Success in today's research enterprise requires an understanding of how to work effectively with data, yet most researchers have never had any formal training in data management. Libraries have begun developing services and programs to help researchers meet the demands of the data-driven research enterprise, giving librarians exciting new opportunities to use their expertise and skills. *The Medical Library Association Guide to Data Management for Librarians* highlights the many ways that librarians are addressing researchers' changing needs at a variety of institutions, including academic, hospital, and government libraries. Each chapter ends with "pearls of wisdom," a bulleted list of 5-10 takeaway messages from the chapter that will help readers quickly put the ideas from the chapter into practice. From theoretical foundations to practical applications, this book provides a background for librarians who are new to data management as well as new ideas and approaches for experienced data librarians.

Acquisitions in Health Sciences Libraries Oct 14 2019 Emphasizes how to do it descriptive advice rather than broad generalities and theoretical constraints.

Health Librarianship: An Introduction Mar 19 2020 Intended for students interested in careers as health sciences librarians, this insightful book presents a current view of trends and issues in the field of health librarianship from leading scholars and practitioners. • Presents current information on key issues and trends in health librarianship from contributors with many decades of combined experience • An ideal textbook for students interested in careers as health sciences librarians

A Guide to Developing End User Education Programs in Medical Libraries Oct 26 2020 Explore a wealth of ideas, insights, and approaches that can be used or adapted by any medical library!

Curricular changes in the health professions, coupled with a growing acceptance of the Internet as a tool for daily living, have contributed to a climate of change and opportunity for health sciences libraries. *A Guide to Developing End User Education Programs in Medical Libraries* will help graduate students in library science, entry-level medical librarians, and experienced educators to understand best practices and to build, expand, and improve medical library-sponsored educational programs. *A Guide to Developing End User Education Programs in Medical Libraries* is designed to aid and inform professionals who develop, teach, or evaluate end-user education programs in health sciences libraries.

Eighteen case studies represent the ideas and approaches of more than fifteen private and public institutions in the United States and the Caribbean. The studies focus on effective end-user programs for medical information electives, veterinary medicine programs, health care informatics, and evidence-based medicine, plus instructional programs for teaching residents, ThinkPad-facilitated instruction, and more. The guide also examines how several medical libraries have created and expanded their end-user education programs. The contributors to *A Guide to Developing End User Education Programs in Medical Libraries* are health sciences librarians from teaching hospitals, medical/dental/veterinary schools, and health professions-focused universities in a dozen U.S. states and the West Indies. Each of them is involved in designing, teaching, and evaluating user education. This

book will help you educate students of medicine, pharmacy, physical therapy, dentistry, and veterinary medicine, plus residents and practicing health professionals. The educational objectives and approaches in the case studies include: clinical medical librarianship integrating informatics objectives into curricula developing credit and non-credit coursework distance learning using new and emerging technologies to improve instruction The case studies in *A Guide to Developing End User Education Programs in Medical Libraries* follow a format similar to that of the structured abstract, including introduction, setting, educational approaches, evaluation methods, future plans, conclusion, and references. Some are illustrated with tables and figures. Several are supplemented by material in chapter-specific appendixes. Further information about specific classes, programs, or teaching philosophies is made available via Web sites featured in the book. Let this valuable guide help you—and your institution—take advantage of the opportunities available at this exciting time in the evolution of library science!

Strategic Collaborations in Health Sciences Libraries Jun 14 2022

Health sciences librarians need to optimize collaborating with others in their institutions and beyond. An understanding of what leads to successful collaborations is beneficial and empowering. By using case studies of varieties of collaborations, *Strategic Collaborations in Health Sciences Libraries* provides a framework and evidence about key factors to consider when thinking about building and sustaining successful collaborations. Readers of this book are encouraged to contact the chapter authors to obtain more details than those provided in the book. This connection between experts with collaboration experience and those seeking to understand successful collaborations is the key impact of this book. Focusing on the positive aspect of collaboration in health sciences libraries, this book encourages others to form collaborations mutually beneficial to the library and the collaboration partner. Through case studies, readers are exposed to new ideas and ways to enhance existing collaborations. By contacting individual authors and learning more about their experiences, readers share ideas and connect with a network of librarians with collaboration expertise.

Handbook of Medical Library Practice: Health science librarianship and

administration Jun 02 2021

3D Printing in Medical Libraries Jan 09 2022 This book provides librarians interested in starting a 3D printing service with an overview of 3D printing in medical libraries. It will appeal to those looking to start a 3D printing service or understand the 3D printing space as it relates to medical education, practice, and research.

Answering Consumer Health Questions Feb 27 2021 Patrons seeking medical information are often trying to gain control following an upsetting diagnosis--working with them can be rewarding and difficult. In this practical, readable guide, consumer health reference expert Michele Spatz, gives you an understanding of the psychology of those seeking medical information and the skills necessary to respond usefully and appropriately. Spatz outlines the most common inquiries and behaviors of health information searchers and the most useful go-to resources. Sample librarian-patron interactions in every chapter give you useful strategies and scripts. Dozens of templates and forms and tips on everything from setting up the reference desk to encourage confidential inquiries to using body language to signal your availability will help you create a welcoming, empowering atmosphere in your library. Chapters on ethics and potential legal issues guide you through the nitty-gritty of what constitutes practicing medicine without a license, confidentiality requirements, and more. Sections on email, virtual, and telephone reference will help you establish clear guidelines, and creative tips on marketing to healthcare providers will help you forge valuable new partnerships. A section on self-care offers strategies for dealing with job-induced stress. Every information professional who helps patrons with health inquiries will want a copy of this useful, inspiring book.

Planning and Promoting Events in Health Sciences Libraries Aug 24

2020 Library programming can increase patron awareness of and engagement with library resources and services. However, creative programming and promotion is what really draws people in, especially as libraries evolve and become more virtual. How can librarians reach

their unique user groups when those users never have to step foot in the library? *Planning and Promoting Events in Health Sciences Libraries: Success Stories and Best Practices* presents a simple blueprint for planning and promoting library events and programs written with medical librarians in mind. Whether you work in an academic or hospital setting, this book is full of useful suggestions and tips for taking the stress and confusion out of the library programming and event planning process. Drawing upon the wisdom and experience of health sciences librarians from across the country, this book will: Walk readers through the stages of library programming and promotion Act as a how-to for health sciences librarians looking to create successful outreach events Highlight how other health sciences libraries just like yours have successfully created programs for their users, even those with little to no programming budget Encourage readers to think creatively about their own programming and events *Planning and Promoting Events in Health Sciences Libraries: Success Stories and Best Practices* will show you that you don't need a degree in marketing in order to create successful outreach events. Health sciences librarians can take what they already know about their patrons and their own libraries and apply that knowledge to every planning process with the help of the practical strategies found in this guide.

The Medical Library Association Guide to Providing Consumer and Patient Health Information Apr 12 2022 Comprised of fifteen chapters written by experienced consumer health librarians, *The Medical Library Association Guide to Providing Consumer and Patient Health Information* is designed for library and information science graduate students as well as librarians new to health and medical librarianship, regardless of library setting. It is comprehensive in scope, covering all aspects of consumer and patient health and medical information from their humble, grassroots beginnings to the ever-evolving applications of new technology and social media. In between, the mundane aspects of health and medical librarianship, such as needs assessment, costs, budgeting and funding, and staffing are discussed. Adding richness to this discussion are the coverage of more sensitive topics such as patient-friendly technology, ethical issues in providing consumer and patient health information, meeting the needs of diverse populations, and

responding to individuals from various cultural backgrounds. No comprehensive picture of consumer and patient health librarianship would be complete without addressing the critical importance of marketing and strategic partnerships; such discussions round out this invaluable guide.. Patients today must be knowledgeable enough to participate in their health and well-being. Shorter hospital stays, changing reimbursement patterns and the gradual shift towards focusing on proactively maintaining health and managing disease require patients to be informed and actively engaged. Education, information and understanding are important components of actively-engaged patients. Correspondingly, in today's e-world, there is a glut of information resources available through the Internet – from YouTube videos to Googling to blogs and Twitter feeds. What is lacking in these information-rich times is the relevance of meaning and context for those who ask, “Does this health and medical information apply to me and my unique clinical picture?” or “How do I use this information?” As knowledge navigators, information technology wizards and content experts, librarians offer focused responses to individuals' specific and highly personal health and medical information queries. In a new healthcare world order of optimizing health and minimizing hospitalizations, such a service is invaluable. Sadly, there still exists in our highly networked and technological age an information gap for those who struggle in obtaining meaningful health or medical information. These individuals may be foreign-born, non-English speaking, poor, rural, aged or semi-literate. Whatever their status, librarians must have the wherewith-all to find germane resources and also help create responsive mechanisms to bridge that health information gap for vulnerable citizens. The Medical Library Association Guide to Providing Consumer and Patient Health Information will guide you on the road to providing that response.

Health Care Resources on the Internet Dec 28 2020 Make Internet medical research simpler and more productive! The rapid proliferation of Web sites makes finding medical information easy. Knowing when the information is accurate and reliable can be much more difficult. *Health Care Resources on the Internet: A Guide for Librarians and Health Care Consumers* discusses how to locate, evaluate, and use health

care information available in online form. As expectations shift from finding information in books to locating it on the World Wide Web, Health Care Resources on the Internet provides you with the skills you need. Whether you're a first-time Internet user unfamiliar with search engines or an old hand at Boolean logic, you will find helpful search tips and strategies. Moreover, this comprehensive book offers specific advice on assessing the reliability of the information you find. Health Care Resources on the Internet simplifies your hunt for information by recommending trustworthy Web sites. It covers topics including: consumer and professional megasites for health care information using Medline searching for information on specific diseases finding open clinical trials consumer health information alternative medicine Illustrated with tables and figures, Health Care Resources on the Internet is an essential guidebook for health-conscious consumers, information professionals, and medical professionals.

Transforming Health Sciences Library Spaces Nov 26 2020 This book presents firsthand experiences and thoughts of librarians on the transformation of health sciences library spaces. They provide insights into planning, budgeting, collecting, and integrating user feedback, collaborating with leadership and architects and thriving in the good times and the tight times.

A Medical Librarian?--What's That? Sep 24 2020

Introduction to Health Sciences Librarianship Sep 05 2021 Health sciences librarianship today demands a balance among computer files, human ingenuity, and print sources. The many information sources presently available enable health sciences librarians to do a better job, but that job has also become correspondingly more difficult. This professional reference surveys the various types of print and electronic resources important to the health sciences and provides valuable practical advice to librarians for meeting the information needs of researchers, practicing physicians, and other health professionals. Health sciences librarianship today demands a balance among electronic files, human ingenuity, and print sources. Thanks to computerization and telecommunications, librarians can do much more now than just a few years ago. While the tremendous growth in available resources has enabled librarians to provide more thorough information to patrons, the

process of doing so has become correspondingly more complex. While librarians still need to use many traditional skills, they must also develop new ways of finding and utilizing information. This professional reference surveys the field of health sciences librarianship and provides extensive practical advice to assist health sciences librarians in meeting the information needs of their patrons. Because journal literature is the principal medium of information in the health sciences, the book begins with an examination of the roles that journals play as well as the large proportion of the library budget that they consume. The volume then discusses techniques of searching journal literature, such as print and electronic indexing and abstracting tools. Additional chapters are devoted to the selection and organization of health sciences books, and reference tools and services. Special attention is given to the electronic distribution of biomedical information. With important sources of health information now becoming available via the Internet, this book provides a point of departure to evaluate those sources. The final chapter discusses the various environments that shape health sciences librarianship, such as library settings, professional associations, and economic contexts.

The Engaged Health Sciences Library Liaison Feb 16 2020 Liaison roles are generally commonplace in medical and health sciences libraries as librarians strive to develop and enhance relationships and collaborations with clinicians and faculty. While the liaison of the past acted primarily as the main contact between respective departments and the library providing a facilitative function (e.g. arranging for instruction sessions, inviting feedback on the collection, providing updates on new programs and services, etc.), today's liaison activities are more proactive and robust. The Engaged Health Sciences Library Liaison features ten program descriptions that illustrate how the reach and scope of librarians in the medical/healthcare arena has changed dramatically since the inception of liaison services. The program outcomes described: illustrate a direct impact on curriculum development, address new information types with new access and preservation technologies, expand stakeholder groups, create research and teaching collaborations, and enhance functional roles. This authoritative book copublished by the Medical Library Association demonstrates that collaboration and

communication, the basic tenets of a liaison program, breed innovative programs and services that are relevant, current, and valuable.

Medical Libraries Oct 06 2021

The Clinical Medical Librarian's Handbook Feb 22 2023 Discovering what characterizes strong clinical medical librarianship and how those characteristics have been and are supporting clinicians in their delivery of evidence-based medicine can help those in this profession evaluate and strengthen their own programs. Perhaps more importantly, learning about and from leaders in clinical medical librarianship can help not only other librarians but also clinicians and other healthcare professionals strategize to ensure that their programs stay abreast of the rapidly changing healthcare field using methods and approaches that recognize the importance of providing biomedical information and adapting to new technology and research requirements. Beginning with a discussion of the birth of the Clinical Medical Librarian (CML) and continuing with chapters that explore current innovative programs conducted by CMLs, *The Clinical Medical Librarians Handbook* piques reader's interest in this exciting professional field through descriptive scenarios. The book moves quickly through the history of librarians accompanying clinicians on medical wards to the realization of librarians partnering with clinicians in the face of a rapidly changing healthcare scene. Success and challenges are discussed by professional CMLs working in urban academic medical centers. *The Clinical Medical Librarians Handbook* is intended for any library student, practicing librarian or health administrator interested in understanding the variety of roles medical librarians play in the healthcare system of the United States, how medical librarians interact with clinicians and patients, the power of patient-centered care and technology, the importance of information to public health, novel ways to introduce and teach clinical learners to use resources, how clinical medical librarians learn to do the job and tips for managing clinical medical library programs.

The Medical Library Association Guide to Answering Questions about the Affordable Care Act May 13 2022 Following the passage and implementation of the Affordable Care Act (ACA), librarians are more frequently called upon to provide assistance with navigating the Health Insurance Marketplace and understanding health insurance terminology

and forms. Libraries offer an ideal context for health insurance information seeking, as librarians have traditionally assisted with completing public assistance forms and are well-trained in ascertaining and meeting information needs. The Medical Library Association Guide to Answering Questions about the Affordable Care Act is designed to serve as a practical guide for librarians seeking to learn more about the ACA; locate authoritative, nonbiased information regarding the ACA; and serve patrons searching for ACA information for personal or research purposes. While the book focuses specifically on the unique role that health sciences librarians play in serving the general public, health care providers, biomedical researchers, and health sciences students, the book contains guidance relevant to any information professional working with ACA information.

The Integrated Medical Library Jul 23 2020 First published in 1991, Library automation has advanced at such a rapid pace within the last few years that librarians who have been limited by either budget or hardware constraints are today able to automate at least some library functions. Even though presentations at meetings describing individual efforts have been published in the literature, there has not been a comprehensive text discussing the status of integration at all levels of library management as it exists today. The Integrated Medical Library addresses this need by presenting the results of a survey of automated systems currently used in medical libraries as a basis on which to discuss various methods for integrating these systems. This includes serials, cataloging, circulation, acquisitions, internal database management systems, external database search procedures, and management and financial control. The book emphasizes current practices and procedures and proposes methods for libraries to improve their performance and services. Part I defines an integrated online library system and describes the study design and analysis of results. Part II describes commercially available integrated online library systems currently used by medical libraries. Part III discusses the specialized integrated online library systems of the U.S. National Library of Medicine and the Swedish Planning and Rationalization Institute for the Health and Social Services. Part IV describes ad hoc integrated functions currently used by medical libraries, while Part V discusses the various means of integration.

Assembling the Pieces of a Systematic Review Mar 11 2022 Here is a complete guide for librarians seeking to launch or refine their systematic review services. Conducting searches for systematic reviews goes beyond expert searching and requires an understanding of the entire process of the systematic review. Just as expert searching is not fully mastered by the end of a library degree, mastering the systematic review process takes a great deal of time and practice. Attending workshops and webinars can introduce the topic, but application of the knowledge through practice is required. Running a systematic review service is complicated and requires constant updating and evaluation with new standards, more efficient methods, and improved reporting guidelines. After a brief introduction to systematic reviews, the book guides librarians in defining and marketing their services, covering topics such as when it is appropriate to ask for co-authorship and how to reach out to stakeholders. Next, it addresses developing documentation and conducting the reference interview. Standards specific to systematic reviews, including PRISMA, Institute of Medicine, and Cochrane Collaboration, are discussed. Search strategy techniques, including choosing databases, harvesting search terms, selecting filters, and searching for grey literature are detailed. Data management and critical appraisal are covered in detail. Finally, the best practices for reporting the findings of systematic reviews are highlighted. Experts with experience in both systematic reviews and librarianship, including the editors of the book, contributed to the chapters. Each step (or piece) of the review process (Planning the review, Identifying the studies, Evaluating studies, Collecting and combining data, Explaining the results, and Summarizing the review into a report), are covered with emphasis on information roles. The book is for any librarian interested in conducting reviews or assisting others with reviews. It has several applications: for training librarians new to systematic reviews, for those developing a new systematic review service, for those wanting to establish protocols for a current service, and as a reference for those conducting reviews or running a service. Participating in systematic reviews is a new frontier of librarianship, in which librarians can truly become research partners with our patrons, instead of merely providing access to resources and services.

Accreditation in the Health Sciences Dec 08 2021 This handbook provides the needed information about accreditation to enable any library team to prepare for and be an integral part of an accreditation process.

Guardians of Medical Knowledge Jun 21 2020 Jennifer Connor explores the worldview of leaders in American medicine with respect to medical literature, history, libraries, and librarianship. Tracing the first fifty years of the Medical Library Association (MLA) from its conception as a resource for libraries to its post-World War II role as a national, professional organization, this thorough study portrays the 'genesis' of the MLA through analysis of its origins, its dominant medical culture, and its intricate network of physician leaders.

The Medical Library Association Encyclopedic Guide to Searching and Finding Health Information on the Web Jan 17 2020 Searching for health information may be the most important type of search a librarian performs in a day. Instead of starting a health care search with a blank computer screen or simply accessing ordinary information available most anywhere on the Web, you can begin with help from the prestigious Medical Library Association. Each entry will show you how an experienced health sciences librarian would approach the question. You can begin a truly valuable search knowing: Special searching issues What to ask Where to start Supplementary search strategies Topic profile Recommended search terms and important sites Hotline phone numbers FAQs Publications on the Internet Professional Organizations Patient Support organizations and discussion groups Best "One-Stop-Shops Finally, there's one read-reference source, written by librarians to help their colleagues, that contains every important aspect of the question you or your patron want to answer. It's time-saving, it's authoritative, it sets a new standard for comprehensive medical information reference. Let a fellow librarian be your guide through the sometimes dizzying amount of information available. Find hundreds of specific entries grouped in three easy-to-use volumes.

Information Access and Delivery in Health Sciences Libraries May 21 2020 Focuses on circulation, interlibrary loan and document delivery, and fee-based services, illustrating both the unique aspects of health sciences libraries and those they have in common with other libraries. A

text for library schools and professional training courses, and a reference for librarians and administrators. Notes that health sciences libraries continue to take the lead in implementing new technologies and approaches. Annotation copyright by Book News, Inc., Portland, OR
Diversity and Inclusion in Libraries Mar 31 2021 This book explores some of the challenges that libraries and librarians face due to diversity and inclusion issues among library staff, as well as the patrons that they serve. Its goal is to increase awareness of and sensitivity to the social, cultural, and educational needs of everyone involved.

Health Informatics for Medical Librarians Nov 07 2021 Written specifically for information professionals, this text helps you grasp the fundamentals of a rapidly emerging field and describes how medical libraries can be essential players in the health informatics revolution. The book includes discussion of the history, role, and infrastructure of medical informatics as well as its impact on access to medical information and the culture and quality of medical care. From data and information processing to database management, telecommunications and networks, computer-aided instruction, and special technologies like wearable computers, you'll find thorough information on medical knowledge and the use of information technology tools in the health sciences. All major arenas--including nursing, pharmaceutical, dental, public health, hospital, and veterinary informatics--are considered in detail. A must-have for every medical or health library and information center, this is also an ideal text for undergraduate or graduate-level courses in biomedical information management.

Health Sciences Environment and Librarianship in Health Sciences Libraries Nov 14 2019

Transforming Medical Library Staff for the Twenty-First Century May 01 2021 Transforming Medical Library Staff for the Twenty-First Century focuses on how the medical library can redeploy its staff to support these new services through actively engaging and empowering them in the process. It shares best practices in developing and motivating staff to accept and welcome the changing priorities of medical libraries.

Electronic Resources in Medical Libraries Feb 10 2022 Give your patrons access to the digital content they need Electronic Resources in Medical Libraries is an essential guide to the challenges of acquiring,

licensing, and managing the electronic access and use of books and journals. Medical librarians working in a variety of settings, including academic health centers, hospital libraries, and government health associations, provide entry-level, mid-career, and experienced librarians with comprehensive information and advice on dealing with electronic resources. This invaluable resource examines a wide range of issues, including collection development, pricing, open access, licensing, remote access, statistics, publisher liability, and the Semantic Web. As healthcare professionals, researchers, educators, and students rely more and more on digital content, medical libraries spend more and more time dealing with the complexities surrounding the use of e-resources. *Electronic Resources in Medical Libraries* examines the issues they face everyday, including the shift from print to electronic materials, off-campus and cross-campus access, usage statistics, journal pricing, open-access publishing, licensing, collection development, and much more. Topics addressed in *Electronic Resources in Medical Libraries* include: how to negotiate consortial packages how to use an electronic resource management (ERM) system how to create a portal to share electronic resources how to consolidate costs and provide wide access how open access affects pricing how to establish and maintain access to licensed e-resources how to develop a combined e-journal Web page how off-campus students interact with a full-service document delivery option for electronic journals how to integrate e-resources into an online catalog how to apply emerging Semantic Web technologies to digital libraries and much more *Electronic Resources in Medical Libraries* is an invaluable professional guide for medical and academic librarians, and a helpful classroom resource for faculty and students in library schools.

Introduction to Health Sciences Librarianship Dec 20 2022 Get the foundational knowledge about health sciences librarianship. The general term “health sciences libraries” covers a wide range of areas beyond medical libraries, such as biomedical, nursing, allied health, pharmacy, and others. *Introduction to Health Sciences Librarianship* provides a sound foundation to all aspects of these types of libraries to students and librarians new to the field. This helpful guide provides a helpful overview of the health care environment, technical services, public services, management issues, academic health sciences, hospital

libraries, health informatics, evidence-based practice, and more. This text provides crucial information every beginning and practicing health sciences librarian needs—all in one volume. *Introduction to Health Sciences Librarianship* presents some of the most respected librarians and educators in the field, each discussing important aspects of librarianship, including technical services, public services, administration, special services, and special collections. This comprehensive volume provides all types of librarians with helpful general, practical, and theoretical knowledge about this profession. The book's unique "A Day in the Life of . . ." feature describes typical days of health sciences librarians working in special areas such as reference or consumer health, and offers anyone new to the field a revealing look at what a regular workday is like. The text is packed with useful figures, screen captures, tables, and references. Topics discussed in *Introduction to Health Sciences Librarianship* include: overview of health sciences libraries health environment collection development of journals, books, and electronic resources organization of health information access services information services and information retrieval information literacy health informatics management of academic health sciences libraries management and issues in hospital libraries library space planning specialized services *Introduction to Health Sciences Librarianship* provides essential information for health sciences librarians, medical librarians, beginning and intermediate level health sciences/medical librarians, and any health sciences librarian wishing to review the field. This crucial volume belongs in every academic health sciences library, hospital library, specialized health library, biomedical library, and academic library.

The Medical Library Association Guide to Developing Consumer Health Collections Sep 17 2022 The Medical Library Association *Guide to Developing Consumer Health Collections* guides both library graduate school students and seasoned librarians from academic, health sciences, and public libraries, to develop, maintain, nurture, and advertise consumer health collections. This authoritative guide from the respected Medical Library Association covers all that is involved in developing a new consumer health library including: Conducting community needs assessments and forging community partnerships

Concerns about physical space, computers, and materials Funding, budgeting, and staffing Privacy and confidentiality concerns Publicity and advertising This book guides both graduate library school students and seasoned librarians from all types of libraries—academic, health center, hospital, public, and school—to develop, maintain and nurture not only consumer health collections, but also community partnerships and outreach programs. Examples of librarians’ innovative and creative consumer health initiatives are included. Chapters include all that is involved in developing a consumer health collection including conducting community needs assessments; concerns about physical space, computers, and materials; budgeting, licensing, and staffing; privacy and confidentiality concerns; and community partnership and outreach.

A History of Medical Libraries and Medical Librarianship Jan 21 2023

A History of Medical Libraries and Librarianship in the United States: From John Shaw Billings to the Digital Era presents a history of the profession from the beginnings of the Army Surgeon General’s Library in 1836 to today’s era of the digital health sciences library. The purpose of this book is not only to make this history available to the profession’s practitioners, but also to provide context as medical librarians and libraries enter a new age in their history as the digital information environment has undercut the medical library’s previous role as the depository of the print based KBI/information base. The book divides the profession’s history is divided into seven eras: 1. The Era of the Library of the Office of the Army Surgeon General and John Shaw Billings – 1836 – 1898 2. The Era of the Gentleman Physician Librarian – 1898 to 1945 3. The Era of the Development of the Clinical Research Infrastructure (NIH), the Rapid Expansion in Funded and Published Clinical Research and the Emergence of Medical Librarianship as a Profession – 1945 – 1962 4. The Era of the Development of the National Library of Medicine, Online digital Subject Searching (Medline) and the Creation of the National Health Science Library Infrastructure– 1962 – 1975 5. The Medline Era – A Golden Age for Medical Libraries – 1975 – 1995 6. The Era of Universal Access to Information and the Transition from Paper to Digitally Based Medical Libraries – 1995 – 2015 7. The Era of the Digital Health Sciences Library – 2015 – Each era is reviewed

through discussing the developments in the field and the factors which drove those developments. The book will provide current and future medical librarians and information specialists an understanding of the development of their profession and some insights into its future.

Medical Libraries in Hospitals Aug 04 2021

Health Sciences Librarianship Jul 15 2022 This comprehensive textbook of health sciences librarianship provides the library student and new librarian with the background and skills necessary to handle day-to-day activities and provide quality services in a health sciences library or a more general library serving students and practitioners in the health professions. The book has 16 chapters, each authored by an experienced medical librarian and is are organized logically into 4 sections: The Profession, Collection Services, User Services, and Administrative Services, Each chapter contains photographs, figures, tables, and charts illustrating the essential concepts introduced. Overseen by a 3-member editorial board of leading professors in medical librarianship programs, this authoritative text provides students, beginning, and experienced librarians with a comprehensive overview of state-of-the-art medical librarianship.

The Medical Library Association Guide to Managing Health Care Libraries Aug 16 2022

Many hospitals and health care organizations that were independent, freestanding institutions are now part of large health systems that deliver patient care in a variety of inpatient, ambulatory, and community settings. Vast changes in the U.S. health care system are reshaping how librarians provide services to physicians and other patient caregivers, as well as to medical and allied health sciences students and faculty. Twenty one experts have contributed to this groundbreaking text. Their individual chapters offer specific, practical advice on administrative issues, planning and marketing, financial management, space planning, collection development, cataloging and classification, document delivery, audiovisual services -- every aspect of managing today's ever-changing health care library. Required reading for any librarian offering health care information to professionals, faculty, or consumers.

Being a Solo Librarian in Healthcare Apr 19 2020 This book brings to light the current job responsibilities of the healthcare librarian, but at the

same time reveals a dichotomy. In theory, advances in healthcare research promise better care and improved safety for patients. In practice, there are barriers that undermine change. The author calls attention to the underutilized healthcare librarian at a time when clinical information delivery to the doctor or nurse is equal to or more important than how wired the hospital is. This is a book for healthcare stakeholders who support evidence-based practice and for those considering entering medical librarianship. The profession is in flux as hospitals must decide whether they can afford a library and librarian or whether they can afford not to have one. Discusses current trends in healthcare librarianship Describes the daily job duties of a hospital librarian Looks at barriers to hospitals practicing evidence-based medicine Connects improved patient care to healthcare librarian services
