'At last, a volume on civilization that truly reflects the complexity of multiple civilizations. The wealth of contributions Arjomand and Tiryakian have assembled demonstrates the value of an old concept for understanding the awful dilemmas confronting human kind in the global age. Its thoroughgoing renewal here establishes this book as the essential benchmark for future scholars of civilization' - Martin Albrow, Founding Editor of International Sociology and author of The Global Age - winner of the European Amalfi Prize, 1997 'In our tension filled world, many are heralding, and others fearing, a "clash of civilizations." The contributors to this volume provides a healthy and persuasive argument about why this clash need not, and certainly should not, take place. They do so, moreover, not by rejecting the concept of civilization, but by developing a less primordial, homogenous, and essentialist concept of it. An important collection that provides illumination in this sometimes frighteningly dark time' - Jeffrey Alexander, Professor and Chair of Sociology at Yale University 'The concept of civilization may well replace the notions of globalization and identity as the core component in the vocabulary of 21st century sociology. The authors contribute a great deal to the clarification of fashionable controversies around the "clash of civilizations" and "multiculturalism". They go a long way toward purging the concept of civilization of its ideological overtones, and they succeed admirably in turning it into powerful analytic tool of an emerging field of macrosociology, known already as civilizational analysis' - Piotr Sztompka, President, International Sociological Association Although the concept of 'civilization' has deep roots in the social sciences, there is an urgent need to re-think it for contemporary times. This book points to an exhaustion in using 'the nation state' and

'world system' as the basic macro-units of social analysis because they do not get to grips with the 'soft power' variable of cultural factors involved in global aspects of development. Also, globalization requires us to reconsider the link between civilization and a fixed or given territory. This book focuses upon the dynamic aspect of civilizations. Among the topics covered are: · Civilizational analysis and social theory · Global civilization and local cultures · Civilizational forms · Rationalization and Civilization · Civilizations as zones of prestige · Historical and comparative dimensions of civilization · The clash of civilizations. "Oxford Guide to Metaphors in CBT, Building Cognitive Bridges is a remarkable, memorable, and continually fascinating book, one that will be on my repeated reference list for years to come." Robert Leahy, Clinical Professor of Psychology in Psychiatry at Well-Comell University Medical College -- There is an unseen world most people can't begin to imagine... .. Where the most ordinary things can turn against you. The village of Templeton was evacuated during World War 2. Now even the ghosts are leaving - because something terrible stayed behind. Ben and his new friends at the School of Night must find out what's going on. But they are soon trapped in the village, where even the trees and plants turn against them. Could you survive against all the odds? Could you solve the ancient mystery and free the village from a curse that threatens the whole world? If you could, then maybe you have what it takes to join The School of Night This book explores numerical implementation of Finite Element Analysis using MATLAB. Stressing interactive use of MATLAB, it provides examples and exercises from mechanical, civil and aerospace engineering as well as materials science. The text includes a short MATLAB tutorial. An extensive solutions manual offers detailed solutions to all problems in the book for classroom use. The second edition includes a new brick (solid) element with eight nodes and a one-dimensional fluid flow element. Also added is a review of applications of finite elements in fluid flow, heat transfer, structural dynamics and electro-magnetics. The accompanying CD-ROM presents more than fifty MATLAB functions. In October 1998 a conference was held in Lisbon to celebrate Ludwig Streit's 60th birthday. This book collects some of the papers presented at the conference as well as other essays contributed by the many friends and collaborators who wanted to honor Ludwig Streit's scientific career and personality. The contributions cover many aspects of contemporary mathematical physics. Of particular importance are new results on infinite-dimensional stochastic analysis and its applications to a wide range of physical domains.
