The 100 Greatest Ideas for Building Your Career will help you buck the odds. Just think for a moment about how much of your career is left to chance. It can depend on who happens to be your boss when you get promoted, for example, and how popular and influential he or she is. The 100 Greatest Ideas for Building Your Career includes advice and tips from fifteen chairmen and directors of some of the UK's largest companies. It will help you build a strategy for managing the elements of your career that you can control (and some you thought you couldn't). Ken

Langdon shows how you can. Just some of the ideas Ken Langdon reveals are: The 8 greatest ideas for winning at company politics The 6 greatest ideas for spending cleverly The 8 greatest ideas for standing out in the crowd The 4 greatest ideas for standing out in the more senior crowd ?and 74 other fantastic ideas, tips and tricks that will take you to the very top! 100 Greatest books will enable you to take control of your life and your career. Packed with 100 simple but wonderfully effective ideas, these books are fun to use and easy to put into practice, giving you instant results. Shows employees at any level of an organisation how to come up with new ideas and then how to develop them. Multiply math mastery and interest with these inspired teaching tactics! Invigorate instruction and engage students with this treasure trove of "Great Ideas" compiled by two of the greatest minds in mathematics. From commonly taught topics in algebra, geometry, trigonometry and statistics, to more advanced explorations into indirect proofs, binomial theorem, irrationality, relativity and more, this guide outlines actual equations and techniques that will inspire veteran and new educators alike. This updated second edition offers more proven practices for bringing math concepts to life in the classroom, including 114 innovative strategies organized by subject area User-friendly content identifying "objective," "materials," and "procedure" for each technique A range of teaching models, including hands-on

and computer-based methods Specific and straightforward examples with step-by-step lessons Written by two distinguished leaders in the field-mathematician, author, professor, university dean and popular commentator Alfred S. Posamentier, along with mathematical pioneer and Nobel Prize recipient Herbert A. Hauptman-this guide brings a refreshing perspective to secondary math instruction to spark renewed interest and success among students and teachers. Alex Talbot and Aki Kamoza, husband-and-wife chefs and the forces behind the popular blog Ideas in Food, have made a living out of being inquisitive in the kitchen. Their book shares the knowledge they have gleaned from numerous cooking adventures, from why tapioca flour makes a silkier chocolate pudding than the traditional cornstarch or flour to how to cold smoke just about any ingredient you can think of to impart a new savory dimension to everyday dishes. Perfect for anyone who loves food, Ideas in Food is the ideal handbook for unleashing creativity, intensifying flavors, and pushing one's cooking to new heights. This guide, which includes 100 recipes, explores questions both simple and complex to find the best way to make food as delicious as possible. For home cooks, Aki and Alex look at everyday ingredients and techniques in new ways—from toasting dried pasta to lend a deeper, richer taste to a simple weeknight dinner to making quick “micro stocks” or even using water to intensify the flavor

of soups instead of turning to long-simmered stocks. In the book's second part, Aki and Alex explore topics, such as working with liquid nitrogen and carbon dioxide—techniques that are geared towards professional cooks but interesting and instructive for passionate foodies as well. With primers and detailed usage guides for the pantry staples of molecular gastronomy, such as transglutaminase and hydrocolloids (from xanthan gum to gellan), *Ideas in Food* informs readers how these ingredients can transform food in miraculous ways when used properly. Throughout, Aki and Alex show how to apply their findings in unique and appealing recipes such as Potato Chip Pasta, Root Beer-Braised Short Ribs, and Gingerbread Soufflé. With *Ideas in Food*, anyone curious about food will find revelatory information, surprising techniques, and helpful tools for cooking more cleverly and creatively at home.

What happens if I drop an ant? What books are bad for you? What percentage of the world's water is contained in a cow? The Oxbridge undergraduate interviews are infamous for their unique ways of assessing candidates, and from these peculiar enquiries, professors can tell just how smart you really are. John Farndon has collected together 75 of the most intriguing questions taken from actual admission interviews and gives full answers to each, taking the reader through the fascinating histories, philosophies, sciences and arts that underlie each problem. This is a book for everyone who likes to think they're clever, or who thinks they'd like to be clever. And cleverness is not just knowing stuff, it's how laterally, deeply and interestingly you can bend your brain. Guesstimating the population of Croydon, for example, opens a chain of thought from which you can predict the strength of a nuclear bomb ...and that's just the start of it. Completely revised and updated edition of this very popular and successful small business book The first edition of 201 Great Ideas for Your Small Business was

Each strategy is packed with great examples of successful contemporary and historical

designs – from a designer dress made out of an old typewriter to ticket machines powered by recycled bottles in China, via the reimagining of famous brand logos and mis-use of photocopiers. Packed with practical projects to kick-start inventive thought in idea-blocked moments, this book explores creative thinking across all visual arts disciplines. Throughout history, some books have changed the world. They have transformed the way we see ourselves - and each other. They have inspired debate, dissent, war and revolution. They have enlightened, outraged, provoked and comforted. They have enriched lives - and destroyed them. Now Penguin brings you the works of the great thinkers, pioneers, radicals and visionaries whose ideas shook civilization and helped make us who we are. Perhaps the most widely read thinker of all time, Confucius transformed Chinese philosophy with his belief that the greatest goal in life was pursuit of 'The Way': a search for virtue not as a means to rewards in this world or the next, but as the pinnacle of human existence. This unique little book is packed with 150 low-cost activities for grandparents and their grandchildren. In 2052: A Global Forecast for the Next 40 Years (Chelsea Green, 2012), Jorgen Randers draws on his own experience in the sustainability area, global forecasting tools, and the predictions - included in the book as 'Glimpses' - of more than thirty thought leaders to guide us through the future he feels is most likely to emerge towards the middle of the century. At a meeting of 25 of the 'Glimpse' authors in Cambridge in October 2013, each participant was invited to present a 'great idea' (or thought, or development or fact) that they believed could improve on world developments over the next forty

years. *Disrupting the Future - Great ideas for Creating a Much Better Future* is the result of this process and is a remarkable collection of ideas and proposals by a diverse set of thought-leaders, each of which has responded in their own creative way to Jorgen Randers' concluding challenge in 2052: 'Please help me make my forecast wrong. Together we could create a much better world.'

The most trusted explainer of the most mind-boggling concepts pulls back the veil of mystery that has too long cloaked the most valuable building blocks of modern science. Sean Carroll, with his genius for making complex notions entertaining, presents in his uniquely lucid voice the fundamental ideas informing the modern physics of reality. Physics offers deep insights into the workings of the universe but those insights come in the form of equations that often look like gobbledygook. Sean Carroll shows that they are really like meaningful poems that can help us fly over sierras to discover a miraculous multidimensional landscape alive with radiant giants, warped space-time, and bewilderingly powerful forces. High school calculus is itself a centuries-old marvel as worthy of our gaze as the Mona Lisa. And it may come as a surprise the extent to which all our most

cutting-edge ideas about black holes are built on the math calculus enables. No one else could so smoothly guide readers toward grasping the very equation Einstein used to describe his theory of general relativity. In the tradition of the legendary Richard Feynman lectures presented sixty years ago, this book is an inspiring, dazzling introduction to a way of seeing that will resonate across cultural and generational boundaries for many years to come. Two simple yet tremendously powerful ideas that shaped virtually every aspect of civilization This book is a breathtaking examination of the two greatest ideas in human history. The first is the idea that the human mind can grasp the universe. The second is the idea that the human mind can grasp itself. Acclaimed philosopher Linda Zagzebski shows how the first unleashed a cultural awakening that swept across the world in the first millennium BCE, giving birth to philosophy, mathematics, science, and virtually all the major world religions. It dominated until the Renaissance, when the discovery of subjectivity profoundly transformed the arts and sciences. This second great idea governed our perception of reality up until the dawn of the twenty-first century. Zagzebski explores how the interplay of the two ideas led to conflicts that have left us ambivalent about the relationship between the mind and the universe, and have given rise to a host of moral and political rifts over the deepest questions human beings face. Should we

organize civil society around the ideal of living in harmony with the world or that of individual autonomy? Zagzebski explains how the two greatest ideas continue to divide us today over issues such as abortion, the environment, free speech, and racial and gender identity. This panoramic book reveals what is missing in our conception of ourselves and the world, and imagines a not-too-distant future when a third great idea, the idea that human minds can grasp each other, will help us gain an idea of the whole of reality. A variety of experienced church leaders, missionaries and other practitioners share simple and effective ideas for enhancing the life, worship and witness of every local church. With humour, realism, real-life stories and top-tips for dealing with challenging situations, here is a welcome aid for all clergy and lay church leaders.

surveys the major advances that were made in art, architecture, sculpture, science, medicine, transportation, and culture. Time magazine called Mortimer J. Adler a "philosopher for everyman." In this guide to considering the big questions, Adler addresses the topics all men and women ponder in the course of life, such as "What is love?", "How do we decide the right thing to do?", and, "What does it mean to be good?" Drawing on his extensive knowledge of Western literature, history, and philosophy, the author considers what is meant by democracy, law, emotion, language, truth, and other abstract concepts in light of more than two millennia of Western civilization and discourse. Adler's essays offer a remarkable and contemplative distillation of the Great Ideas of Western Thought. How do you rate your job satisfaction? Are you bored by the repetitive nature of your work? Are you tired of the eccentricity, and occasional madness, of the big company you work for? Are you beset with internal politics and meetings, bloody meetings and fed up with it?
