Volume 3 The

Some power  
electronic  
converters are  
specifically  
designed to power  
equipment under a  
smoothed DC  
voltage. Therefore,  
the filtering part  
necessarily involves  
the use of auxiliary  
passive components  
(inductors and  
capacitors). This  
book deals with  
technical aspects  
such as classical  
separation between  
isolated and non-  
isolated power  
supplies, and soft  
switching through a  
special converter. It  
addresses the  
problem of  
regulating the  
output voltage of

the switching power supplies in terms of modeling and obtaining transfer of SMPS functions. Power Electronics for Industry and Transport, Volume 3, offers a case study of an isolated flyback power which the complete design is presented: the active and passive components are sized based on the specifications initially set. Particular attention is given to the converter output capacitors and all the surrounding organs. Introducing Essential notions in power electronics from both the theoretical and technological perspectives Detailed chapters with a focus on switch-mode power

supplies, another key area in which power electronics is used is in the supply of energy to a variety of electronic equipment for signal and information processing Presented from a user's perspective to enable you to apply the theory of power electronics to practical applications The volume begins with a chapter by Henri Savall, founder and director of the ISEOR Institute and creator of the SEAM methodology, that presents an overview of the development of the socio-economic approach to management, and its guiding frameworks and

methodology. The chapter s detailed explanation of the underlying thinking, tools, and techniques of socio-economic management serves as the primer for the remainder of the volume. The book is then divided into three sections. The first part presents illustrations of SEAM interventions in different types of organizations, including industrial and service companies, and not-for-profit organizations, including cultural institutions and sports clubs. The next section looks at cross-cultural applications and assessments of SEAM experiments in Africa, Asia, Mexico, and the

United States, with a concluding chapter on intervening in multinational corporations in general. The volume concludes with a section that examines different issues and challenges in SEAM intervention, ranging from the impact on and role of middle managers in the SEAM process, intervening in small organizations, SEAM's facilitative role in operationalizing and institutionalizing information technology, conceptualizing, and implementing organizational change, facilitating merger and acquisition integration, and the

application of socio-economic management in sales and marketing. The book also contains a combined glossary and chapter index that provides a definition of key terms and concepts in the SEAM methodology and where they appear in the volume. These key terms are highlighted in bold italics throughout the volume, illustrating their application in different contexts. Industrial cyber-physical systems operate simultaneously in the physical and digital worlds of business and are now a cornerstone of the fourth industrial revolution.

Increasingly, these systems are becoming the way forward for academics and industrialists alike. The very essence of these systems, however, is often misunderstood or misinterpreted. This book thus sheds light on the problem areas surrounding cyber-physical systems and provides the reader with the key principles for understanding and illustrating them. Presented using a pedagogical approach, with numerous examples of applications, this book is the culmination of more than ten years of study by the Intelligent Manufacturing and Services Systems (IMS2) French

research group, part of the MACS (Modeling, Analysis and Control of Dynamic Systems) research group at the CNRS. It is intended both for engineers who are interested in emerging industrial developments and for master's level students wishing to learn about the industrial systems of the future. This volume applies an inductive experimental approach to recognize, control and resolve the variables that effect the wine-making process and the quality of the final product - focusing on the grape variety-yeast interaction controversy. It contains over 300 drawings,

photographs and photomicrographs that illustrate the diagnostic morphology of wine. This book is a source of basic and advanced knowledge in food science for students or professionals in the food science sector, but it is also accessible for people interested in the different aspects concerning raw material stabilisation and transformation in food products. It is an updated and translated version of the book "Science des aliments" published in 2006 by Lavoisier. "Science des aliments" is a general and introductory food science and technology handbook, based on

the authors' Masters and PhD courses and research experiences. The book is concise, pedagogical and informative and contains numerous illustrations (approximately 500 original figures and tables). In three volumes), it summarizes the main knowledge required for working in food industries as scientists, technical managers or qualified operators. It will also be helpful for the formation of students in food science and biotechnologies (bachelor's and master's degree). Providing a synthesis of practical blueprint and theoretical field

guide to managing design, this comprehensive reference shows how the various disciplines of design - product, packaging, graphic and environmental - create value and contribute to company performance. Cet ouvrage s'adresse principalement aux élèves-ingénieurs et aux étudiants de 1er et 2ème cycles en génie des procédés et génie industriel. Il traite en trois chapitres du calcul matriciel, du calcul différentiel et du calcul opérationnel. Chaque chapitre se termine par de nombreux exercices avec leurs corrigés. Le contenu de ce livre a été élaboré afin de répondre aux besoins en

outils mathématiques des étudiants en génie des procédés. En effet, aujourd'hui, l'étude d'un procédé repose sur des techniques de modélisation, simulation, développement et mise en œuvre de systèmes de supervision. Ces techniques, qui permettent de fabriquer des produits à moindre coût et de réduire l'impact des installations industrielles sur l'environnement, font appel aux calculs matriciel, différentiel et opérationnel. De nombreux exemples, empruntés au génie des procédés, aideront les étudiants à mieux comprendre les

notions théoriques présentées dans ce livre. Cela leur permettra d'analyser avec un œil critique les modèles mathématiques qu'ils seront amenés à développer. Most vols. include Proceedings of the Special Libraries Association. "This book provides a framework for conceptual, theoretical, and applied research in regards to the relationship between technology and humans"-- Provided by publisher. This Round Table examines the role of shippers and transport operators in the logistics chain and includes reports from France, Sweden,

and the Netherlands. The present economic and social environment has given rise to new situations within which companies must operate. As a first example, the globalization of the economy and the need for performance has led companies to outsource and then to operate inside networks of enterprises such as supply chains or virtual enterprises. A second instance is related to environmental issues. The statement about the impact of industrial activities on the environment has led companies to revise processes, to save energy, to optimize transportation.... A

last example relates to knowledge. Knowledge is considered today to be one of the main assets of a company. How to capitalize, to manage, to reuse it for the benefit of the company is an important current issue. The three examples above have no direct links. However, each of them constitutes a challenge that companies have to face today. This book brings together the opinions of several leading researchers from all around the world. Together they try to develop new approaches and find answers to those challenges. Through the individual chapters of this book, the authors present

their understanding of the different challenges, the concepts on which they are working, the approaches they are developing and the tools they propose. The book is composed of six parts; each one focuses on a specific theme and is subdivided into subtopics. This book presents a selection of papers related to the fifth edition of book further to the International Conference on Integrated Design and Manufacturing in Mechanical Engineering. This Conference has been organized within the framework of the activities of the AIP-PRIMECA network whose main scientific field is

Integrated Design applied to both Mechanical Engineering and Productics. This network is organized along the lines of a joint project: the evolution, in the field of training of Integrated Design in Mechanics and Productics, in quite close connection with the ever changing industrial needs over the past 20 years. It is in charge of promoting both exchanges of experience and know-how capitalisation. It has a paramount mission to fulfil, be it in the field of initial and continuous education, technological transfer and knowledge

dissemination through strong links with research labs. For the second time, in fact, the IDMME Conference has been held abroad and, after Canada in 2000, the United Kingdom, more particularly Bath University, has been retained under the responsibility of Professor Alan Bramley, the Chairman of the Scientific Committee of the conference. The Scientific Committee members have selected all the lectures from complete papers, which is the guarantee for the Conference of quite an outstanding scientific level. After that, a new selection has been

carried out to retain the best publications, which establish in a book, a state-of-the-art analysis as regards Integrated Design and Manufacturing in the discipline of Mechanical Engineering. Chimie et industrie (Paris) Thermodynamics includes thirteen independent volumes that define how to perform the selection and calculation of equipment involved in the thirteen basic operations of process engineering, offering reliable and simple methods. Throughout these concise and easy-to-use books, the author uses his vast practical experience and

precise knowledge of global research to present an in-depth study of a variety of aspects within the field of chemical engineering. The main concepts of thermodynamics are presented in detail, and their importance is demonstrated through their various practical applications. In this volume, the author provides a general introduction into the study of thermodynamics. Across the five chapters, users will find different concepts involved in the study of energy, including systems, states, energy, laws, and their associated theorems. In addition, the author provides the

methods needed for understanding the machinery used in applied thermodynamics to encourage students and engineers to build the programs they need themselves. Provides detailed descriptions of thermodynamic phenomena Presents clear analysis and practical applications Includes different concepts involved in the study of energy, including systems, states, energy, laws, and their associated theorems This volume contains the selected manuscripts of the papers presented at the Second IDMME Conference on "Integrated Design and Manufacturing

in Mechanical Engineering", held in Compiègne, France, at the University of Technology of Compiègne, May 27-29, 1998. The purpose of the Conference was to present and discuss topics dealing with the optimization of product design and manufacturing processes with particular attention to (1) the analysis and optimum design of mechanical parts and mechanisms (2) the modeling of forming processes (3) the development of computer aided manufacturing tools (4) the methodological aspects of integrated design and manufacturing in adapted technical and

human environments. The initiative of the conference and the organization thereof is mainly due to the efforts of the french PRIMECA group (Pool of Computer ResoUfces for Mechanics). The international Institution for Production Engineering Research (C.I.R.P.) was helpful to attract international participants. The conference brought together three hundred and twenty worldwide participants. Innovation, in economic activity, in managerial concepts and in engineering design, results from creative activities, entrepreneurial strategies and the

business climate. Innovation leads to technological, organizational and commercial changes, due to the relationships between enterprises, public institutions and civil society organizations. These innovation networks create new knowledge and contribute to the dissemination of new socio-economic and technological models, through new production and marketing methods. Innovation Economics, Engineering and Management Handbook 2 is the second of the two volumes that comprise this book. The main objectives across both volumes are to study the

innovation processes in todays information and knowledge society; to analyze how links between research and business have intensified; and to discuss the methods by which innovation emerges and is managed by firms, not only from a local perspective but also a global one. The studies presented in these two volumes contribute toward an understanding of the systemic nature of innovations and enable reflection on their potential applications, in order to think about the meaning of growth and prosperity The purpose of this book is to question the relationships involved in decision making and the

systems designed to support it: decision support systems (DSS). The focus is on how these systems are engineered; to stop and think about the questions to be asked throughout the engineering process and, in particular, about the impact designers' choices have on these systems. This therefore involves identifying the elements of the problem of decision support systems engineering: the main objects and dimensions to be considered and the relationships they involve, issues at the levels of the decision-maker, of the organization (and even of society), the general approach to

which to subscribe and so on. This book constitutes the refereed proceedings of the Second International Conference on Information Systems for Crisis Response and Management in Mediterranean Countries, ISCRAM-med 2015, held in Tunis, Tunisia, in October 2015. The objectives of the ISCRAM-med conference are to provide an outstanding opportunity and an international forum for local and international researchers, practitioners, and policy makers to address and discuss new trends and challenges with respect to information systems

for crisis response and disaster management. The 14 full papers and 4 short papers presented in this volume were carefully reviewed and selected from 41 submissions. They are organized in topical sections on social computing, modeling and simulation, information and knowledge management, engineering of emergency management systems, and decision support systems and collaboration. Véritable traité de référence et guide pratique, Principes fondamentaux du génie des procédés et de la technologie chimique répertoriée et analyse les

principes de base incontournables pour réaliser des synthèses industrielles de produits chimiques. Il présente également les fondements de la qualité, de la sécurité et de l'environnement, notions indispensables à maîtriser avant de mettre en route et de conduire un procédé. Organisé en 3 parties, cet ouvrage rassemble toutes les notions théoriques et pratiques nécessaires aux chimistes avant d'industrialiser un procédé physique ou chimique. Il permet : d'assimiler les théories et concepts fondamentaux impliqués dans les procédés

(grandeurs physicochimiques, bilans de matière et d'énergie, équilibres physiques et chimiques, etc.), illustrés par 54 exercices d'application. Un chapitre est également consacré à la mise en oeuvre des opérations chimiques en présentant les connaissances de base sur les réacteurs chimiques idéaux et industriels, sur la qualité, la sécurité et l'environnement, d'acquérir une méthodologie efficace pour la conduite de calculs de base à travers 84 exercices et problèmes de synthèse résolus issus de situations industrielles réelles et de la pratique

professionnelle. De difficulté croissante et commentés pas à pas, ces exercices permettent de progresser et de vérifier ses acquis, de savoir interpréter et maîtriser les opérations physiques et chimiques les plus courantes. Totalement inédite, cette partie reposant sur des déterminations expérimentales présente des exemples de bilans effectués dans des opérations de séparation ou de synthèse chimique réalisées à l'échelon pilote (rappel des notions théoriques, description exhaustive du matériel utilisé et des opérations à effectuer, présentation et

interprétation des résultats expérimentaux...). Enrichie de 26 annexes rassemblant les principales données utilisées et de deux index détaillés, cette nouvelle édition constitue un support indispensable pour les étudiants et enseignants en génie des procédés et en chimie industrielle des IUT, STS, licences et masters professionnels ainsi que des écoles d'ingénieurs. Il sera également utile aux ingénieurs et techniciens supérieurs travaillant dans les domaines production et R&D de l'industrie chimique. This book gathers papers presented at the

second installment of the International Conference on Advanced Intelligent Systems for Sustainable Development (AI2SD-2019), which was held on July 08-11, 2019 in Marrakech, Morocco. It offers comprehensive coverage of recent advances in big data, data analytics and related paradigms. The book consists of fifty-two chapters, each of which shares the latest research in the fields of big data and data science, and describes use cases and applications of big data technologies in various domains, such as social networks and health care. All parts of the book

discuss open research problems and potential opportunities that have arisen from the rapid advances in big data technologies. In addition, the book surveys the state of the art in data science, and provides practical guidance on big data analytics and data science. Expert perspectives are provided by authoritative researchers and practitioners from around the world, who discuss research developments and emerging trends, present case studies on helpful frameworks and innovative methodologies, and suggest best practices for efficient and

effective data analytics. Chiefly intended for researchers, IT professionals and graduate students, the book represents a timely contribution to the growing field of big data, which has been recognized as one of the leading emerging technologies that will have a major impact on various fields of science and various aspects of human society over the next several decades. Therefore, the content in this book is an essential tool to help readers understand current developments, and provides them with an extensive overview of the field of big data analytics as it is practiced today.

The chapters cover technical aspects of key areas that generate and use big data, such as management and finance, medicine and health care, networks, the Internet of Things, big data standards, benchmarking of systems, and others. In addition to a diverse range of applications, key algorithmic approaches such as graph partitioning, clustering and finite mixture modeling of high-dimensional data are also covered. The varied collection of topics addressed introduces readers to the richness of the emerging field of big data analytics. The Dynamics of Industrial Collaboration

revisits and reformulates issues previously raised by inter-firm collaboration. The latest research in collaboration, processes and evaluation of cooperation, and industrial and research networks, is presented by way of both empirical and theoretical studies. The authors use several theoretical perspectives to explain inter-firm and inter-institutional collaboration: the theory of transaction costs and contracts, evolutionary theory, and the resource-based view. The book illustrates that none of these approaches are dominant. The three volumes IFIP

AICT 438, 439, and 440 constitute the refereed proceedings of the International IFIP WG 5.7 Conference on Advances in Production Management Systems, APMS 2014, held in Ajaccio, France, in September 2014. The 233 revised full papers were carefully reviewed and selected from 271 submissions. They are organized in 6 parts: knowledge discovery and sharing; knowledge-based planning and scheduling; knowledge-based sustainability; knowledge-based services; knowledge-based performance improvement, and case studies. This

book constitutes the refereed proceedings of the 4th International Conference on Smart Applications and Data Analysis, SADASC 2022, held in Marrakesh, Morocco, during September 22-24, 2022. The 24 full papers and 11 short papers included in this book were carefully reviewed and selected from 64 submissions. They were organized in topical sections as follows: AI-Driven Methods 1; Networking technologies & IoT; AI-Driven Methods 2; Green Energy, Computing and Technologies 1; AI-Driven Methods 3; Green Energy, Computing and Technologies 2; Case studies and Cyber-Physical

Systems 1; Case studies and Cyber-Physical Systems 2; and Case studies and Cyber-Physical Systems 3. Cet ouvrage réconcilie la philosophie, la biologie, la sociologie et les sciences cognitives grâce à un dénominateur commun, la conscience. Il en présente un aspect particulier, le concept d'auto-motivation de champ d'activité en tant que moteur biologique d'un état de conscience, et dont l'informatique systémique permet de révéler l'existence. Si la conscience est mal définie, un cadre réduit permet d'en donner une définition plus précise, observable malgré toute la

complexité psychologique, sociale et technique de l'individu. Ces observations sont de deux natures : une nature d'activité principale et une nature cognitivo-linguistique, modulées par des facteurs de contrôle intrinsèques et extrinsèques. L'argument exposé consiste à présenter un état de conscience relatif à la notion de besoin informationnel instinctif, donc physiologique, et dont les traces porteuses sur les supports physiques (revues, abonnements, etc.) ou numériques (sms, web, etc.), sont analysables par l'extraction de connaissances. Sodium

hypochlorite has long been recognized for its effectiveness as an antiseptic and disinfectant, but its practical use in medicine had been limited due to its reduced stability. However, it has been shown that the method of manufacture can make the vital difference: The ExSept solutions (Amuchina) discussed in this publication differ from other commercially manufactured solutions insofar as they are produced with the help of electrolysis, the result being a highly effective antimicrobial with very good biocompatibility. The papers in this volume concentrate

on the experiences made with ExSept solutions in dialysis applications. They provide a sound understanding of how electrolytically produced sodium hypochlorite solutions differ from other commercial solutions, present different uses as both an antiseptic and disinfectant and alleviate some of the stereotypes associated with their medical use. Both in vitro controlled laboratory evaluations and clinical in vivo prospective randomized trials are introduced in this publication, making it a valuable help for clinicians working in the field of dialysis. COLLABORATIVE  
NETWORKS  
Becoming a  
pervasive paradigm  
In recent years the  
area of  
collaborative  
networks is being  
consolidated as a  
new discipline  
(Camarinha-Matos,  
Afsarmanesh, 2005)  
that encompasses  
and gives more  
structured support  
to a large diversity  
of collaboration  
forms. In terms of  
applications,  
besides the  
“traditional”  
sectors represented  
by the advanced  
supply chains,  
virtual enterprises,  
virtual  
organizations,  
virtual teams, and  
their breeding  
environments, new

forms of  
collaborative  
structures are  
emerging in all  
sectors of the  
society. Examples  
can be found in e-  
government,  
intelligent  
transportation  
systems,  
collaborative virtual  
laboratories,  
agribusiness,  
elderly care, silver  
economy, etc. In  
some cases those  
developments tend  
to adopt a  
terminology that is  
specific of that  
domain; often the  
involved actors in a  
given domain are  
not fully aware of  
the developments in  
the mainstream  
research on  
collaborative  
networks. For  
instance, the grid  
community adopted  
the term “virtual  
organization” but

focused mainly on  
the resource  
sharing  
perspective,  
ignoring most of  
the other aspects  
involved in  
collaboration. The  
European  
enterprise  
interoperability  
community, which  
was initially  
focused on the  
intra-enterprise  
aspects, is moving  
towards inter-  
enterprise  
collaboration.  
Collaborative  
networks are thus  
becoming a  
pervasive paradigm  
giving basis to new  
socio-organizational  
structures. This  
book contains a  
series of papers  
that were presented  
during the Sixth  
IEA International  
Symposium on  
Human Factors in  
Organizational

Design and Management (ODAM '98). The Symposium was sponsored jointly by the International Ergonomics Society, the Dutch Ergonomics Society, NIA TNO and The Ministry of Social Affairs and Employment. These experiences include new ideas, research results, tools, and applications of human-organization interface technology to improving work systems. New technology, changing work force demographics, changing attitudes and values about work and what constitutes real quality of work life, have heightened the need for a true systems approach

to optimizing the interfaces between humans, technology and organizational structures and processes. Growing world competition, and the related need to make organizations more productive and efficient, have further intensified this need to improve work systems. This need is reflected in the rapid development of macroergonomics methods and applications since the first of these O DAM Symposia in 1984. What then was recognized by only a few researchers and practitioners has now become a widely accepted part of the human factors/ergonomics discipline. As

demonstrated by the papers contained herein, application of macroergonomics is having a very real positive impact on sociotechnical systems internationally. Included in this volume are a broad selection of papers on theory, methodology, tools, research findings, and case studies from leading professionals throughout the world. This volume thus provides the reader with some of the latest developments in human-organization interface technology. Collectively, these papers should provide the reader with a good conceptual understanding of

the ergonomic approach to work system design, and of its tremendous potential for improving work systems and the human condition in all cultures. In macro-, meso- and micro-economic systems, the concept of innovation involves a variety of resources and functions. It includes all formal and informal institutions, networks and actors that influence innovation and act as innovation boosters within companies, at the territorial level, at the level of innovation networks or in national economies. This book deals with innovation in a

globalized context in terms of the entrepreneur, enterprise, territorial and sectoral systems and national systems of innovation in which collective innovation processes are formed. This book aims to provide a synthesis of work and ideas done by our team over the last fifteen years in the field of information processing for expression of industrial performance. The statement of objectives on the one hand and the calculation of the other performances are discussed, with the search for the explanation of the link between these two basic steps of

an industrial improvement. Beyond the synthetic and typological character of this study, the originality of this work lies in the consideration of the temporal dimension of the objectives, and spread on performance expressions. A fuzzy processing and multi-criteria aggregations time information that can be quantitative, qualitative or symbolic are proposed, in line with industrial practice and literature in the field of performance management.
