Theory and Design of CNC Systems Mar 24 2020 Computer Numerical
Control (CNC) controllers are high value-added products counting for
over 30% of the price of machine tools. The development of CNC
technology depends on the integration of technologies from many
different industries, and requires strategic long-term support.
"Theory and Design of CNC Systems" covers the elements of control, the
design of control systems, and modern open-architecture control
systems. Topics covered include Numerical Control Kernel (NCK) design
of CNC, Programmable Logic Control (PLC), and the Man-Machine
Interface (MMI), as well as the major modules for the development of
conversational programming methods. The concepts and primary elements
of STEP-NC are also introduced. A collaboration of several authors
with considerable experience in CNC development, education, and
research, this highly focused textbook on the principles and

development technologies of CNC controllers can also be used as a guide for those working on CNC development in industry.

Proceedings of the 35th International MATADOR Conference Jul 20 2022

Presented here are 88 refereed papers given at the 35th MATADOR Conference held at the National University of Taiwan in Taipei, Taiwan in July 2007. The MATADOR series of conferences covers the topics of Manufacturing Automation and Systems Technology, Applications, Design, Organisation and Management, and Research. The proceedings of this conference contains original papers contributed by researchers from

many countries on different continents. The papers cover the principles, techniques and applications associated with: manufacturing processes; technology; system design and integration; and computer applications and management. The papers in this volume reflect: • the importance of manufacturing in international wealth creation; • the emerging fields of micro- and nano-manufacture; • the increasing trend towards the fabrication of parts using additive processes; • the growing demand for precision engineering and part inspection techniques; • measurement techniques and equipment.
